Each Risk Assessment created should be specific to your site and the individuals in your group.

## SITE RISK ASSESSMENT CONSIDERATIONS

SITE LOCATION: Generic Site / School Site / Farm Site

ASSESSOR:

DATE:

HAZARD	RISK TO STAFF & PARTICIPANTS	RISK LEVEL H/M/L	EXISTING CONTROLS. FURTHER ACTIONS	New RISK LEVEL
Rough terrain : steep slopes, animal holes, uneven ground, wet ground	Slips, trips, falls	M	Appropriate footwear to be worn. First aid provision. Inform participants of risks.	M
Water bodies: pond, streams etc	Hypothermia, drowning	L	Children to be supervised by adults when in close proximity of the stream. Appropriate first aid provision and emergency action plan in place.	L
Adverse weather High winds, rain	Hypothermia Falling trees or limbs	M	Check weather reports when possible. All to have appropriate clothing : waterproofs, boots. Staff to have map reading/compass skills. Avoid woodland activities in high winds.	L
Hot weather	Sunburn, dehydration, sunstroke.	L	Check weather reports when possible. Staff to advise on sun protection measures, clothing and need to drink water. Provision of shade / shelter where needed.	L
Insects, ticks	Bites, stings, Lyme disease. Anaphylactic shock.	L	Repellent used and appropriate clothing. First aid provision. All advised on tick removal and symptoms of Lyme disease. Records kept of individuals with known allergic reactions.	L
Plants	Stings, rashes, scratches, poisoning.	L	Strict attention to positive ID of wild foods. Appropriate clothing. Good personal hygiene. First aid available.	L
Soil/water borne diseases	Tetanus. Leptospirosis, E. coli.	M	Risks made known to participants Good personal hygiene, handwashing with soap and water.. All water to be suitably treated.	L
Existing medical conditions	Forgotten medicines, reoccurrence of conditions	M	Staff to be aware of medical conditions, e.g. information on booking form to be carried by leaders. First aid kit available.	L
Old fly-tipped metal, broken glass, barbed wire and other rubbish.	Cuts, puncture wounds	M	Participants to be warned of key areas where dangers are present and urged to proceed with caution. Group to agree to protocol. (The most hazardous rubbish has been removed from the site, but some pieces may remain).	M
Agricultural machinery	Cuts, bruises, broken bones, falling	M	All machinery to be cordoned off in an out-of-bounds location, tools safely stored out of reach of children where possible. All participants to be given an orientation tour of the site to be clear on boundaries and hazards.	L
Livestock (cows/sheep/chickens)	Bites, pecking, diseases, collision	M	Any contact with livestock to be followed by handwashing. All participants to be given instructions on how to interact with animals respecting their space. Walking through fields with livestock, all to stay as one group along the perimeter of the field.	L
Wild animals (badgers, foxes)	Fox bites - rabies	L	Awareness of animals and the hazards. Any participants getting close to animals would have instruction / orientation to the hazards involved	L
Trees / structures	Falling from trees, breaking bones, bruises, cuts, sprains	M	Any climbing to be in suitable trees / structures as agreed by group leader. Health of trees monitored closely. Supervised and assessed by staff depending on who's care the child is in.	L

Risk level = likelihood x severity. High, medium or low.

\*All activities, games and crafts to be brought to groups in an age and stage appropriate manner\*

Each Risk Assessment created should be specific to your site and the individuals in your group.*

### **Other Considerations:**

Along with your site Risk Assessment and Activity Risk Benefit Analysis documents, you are responsible for having developed an **Emergency Action Plan** in order to respond effectively to any such emergencies, serious accidents and injuries.

For all groups, adequate provision of industry appropriate, First Aid qualified staff (IOL Band 3 compliant, such as ICT 16hour Outdoor First Aid qualification). It is generally understood that First Aid Qualifications expire 3 years after the date of last training, however you need to check this with your trainers and to be in alignment with what is appropriate for your group and setting.

It is recommended that all Forest School Leaders, Nature Mentors or Outdoor Educators update their practice as often as possible through CPD and training opportunities.

Some trainings vary and may not have included aspects that others do. It is good to be aware of the need for a woodland management plan (reviewed annually). It is also good practice to develop a policy around minimising detrimental ecological impact so that we are looking after our sites and all those who live there for the longevity and health of all projects.

Other policies to consider developing include:

- First Aid
- Child Protection
- Health and Safety
- Woodland Management Plan
- Minimising detrimental ecological impact

*\*All activities, games and crafts to be brought to groups in an age and stage appropriate manner\**

## Risk Assessment Considerations – Water Activities

Activity Assessed: Activity Location: Assessed By:				Date: Next Assessment Due:			
Type of Hazard	Likelihood of Occurrence	Hazard Severity	Risk Factor	Action to be taken to reduce risk	New Likelihood of Occurrence	New Hazard Severity	New Risk Factor
Slips, trips, scratches / puncture wounds, bruises	3	3	9	Awareness of steep banks and uneven ground in close proximity and in stream. Group to consider appropriate body positions to avoid toppling in (eg. lying on tummy or kneeling on one knee to look into pond or other waterbody.	1	3	3
Drowning	2	5	10	All children to be supervised by an adult (staff member or guardian) when in close proximity to streams / ponds / lakes / rivers. If the site is well known and it is a shallow water-body or stream, with an ongoing group can play at the water with remote supervision only.	1	5	5
Awareness of Leeches	1	4	4	Have an awareness of leeches in your ecosystem. Staff to be informed about recommended methods of removal.	1	3	3
Hypothermia	2	4	8	Consider saving water play to the latter part of a session. Group involved in consideration of weather, clothing and appropriateness of water play.	1	4	4
Ingestion of non-potable water	2	4	8	Bring attention to the hazards of ingesting non-potable water. Where engaging with water filtration and purification activities, ensure all precautions are taken to filter and purify. Most notable: Weil's Disease - Leptospirosis; Blue-Green Algae - Cyanobacteria; Gastro-intestinal illness	1	4	4

Responsible adult to supervise at all times. Suitable ratio of trained adults to persons with tools. No activity may be carried out where there is an individual Risk Factor of 10 or above.

**Benefits and opportunities:** Child's passion offering delightful play; natural tendency to caretake streams by clearing leaves etc; noticing flow forms, water's response to different channels; value of learning water safety; value of learning about water ecology; develop understanding of buoyancy...

\*All activities, games and crafts to be brought to groups in an age and stage appropriate manner\*

## Risk Assessment Considerations – Plant based activities

<b>Activity Assessed:</b>				<b>Date:</b>			
<b>Activity Location:</b>				<b>Next Assessment Due:</b>			
<b>Assessed By:</b>							
Type of Hazard	Likelihood of Occurrence	Hazard Severity	Risk Factor	Action to be taken to reduce risk	New Likelihood of Occurrence	New Hazard Severity	New Risk Factor
Skin irritation	2	3	6	Staff to look for plants with irritant oil in site risk assessment. Plants to look out for include: dropwater hemlock, lords and ladies, yew, If these are found introduce to the group in a good way or ensure they are outside of the boundaries you are using with the group.	1	3	3
Ingesting a toxic plant	3	4	12	Staff to only introduce wild edibles to groups where appropriate. When introducing edible/medicinal plants, highlight the hazards of ingesting plants that you are not 100% sure are edible. Highlight that there are many 'look-alikes' in the plant world. Get the group's agreement that they can explore this with you as you are a trained adult but if they want to do this outside of the session then they would need to confirm the plants with an adult who was 100% confident in their identification and knowledge of the plant. Good food hygiene practices to be adhered to	1	4	4
Ingesting contaminated plant	3	4	12	Staff must be aware of the potential for edible species of plants to be contaminated by heavy metals near roadsides, water borne diseases for those growing in or near water, pesticides and herbicides, animal or bird poo.	1	4	4

Responsible adult to supervise at all times. Suitable ratio of trained adults to persons with tools. No activity may be carried out where there is an individual Risk Factor of 10 or above.

**Benefits and opportunities: Deep connection to plants; develops feeling and realisation that the natural world can provide for our needs; understanding the different qualities of plants and their potential uses can develop a deep respect for plants; crafting can be a very calming activity and develops dexterity; breaks down the impression of 'the wall of green' and start making connections with specific species...**
